

All the information in the world can be found in the World Wide Web.

We don't reach ailes because the server is down.

A Website is a collection of webpages.

The browser is the tool to see Website and search for information.

The markup language can be made in a file of plain text as long as you follow the syntax of the language.

The head is where the important things are, the body is where the interesting things are and the footer is where the foreign things are.

The header are things that we dont see in the pages and the body is where we see everything.

A tag is a definition of the information in the pages and attributes are definition of the definitions.

The angle bracket are the start and end of a tag as well a mathematical simbol.
